

# Download

## Install EPTA from command line

---

You can install EPTA easily from PIPL or Annaconda

### Full version

```
-conda create -n run_epta python=3.8
-conda activate run_epta
-conda install epta
```

### Lite version

```
-conda create -n run_epta_lite python=3.8
-conda activate run_epta_lite
-conda install epta_lite
```

## Download EPTA manually:

---

You can also download EPTA Lite manually:

1. Go to our Github page :  
[https://github.com/Phillip404/easy\\_protein\\_tree\\_annotating](https://github.com/Phillip404/easy_protein_tree_annotating)
2. Press the green button 'Code'
3. Click the subtag 'Download Zip'
4. Unzip the zip file
5. Download **pandas** package
6. Download **biopython** package
7. Download **ETE3** package
8. Open your console, whatever it is
9. Go to the folder you unzipped EPTA
10. Run EPTA and check command line flags:

```
-python3 main.py -h
.. Caution::
'python3' could be a different command according
For example: python, py, py3
```

## 11. Enjoy your tree building!
